VISION AND STRATEGY

Babunty Devi Sahani Foundation

Technology for Public Good

A long-term vision for accessible, community-centered innovation.

WHY WE EXIST

Problems worth investigating with communities.

Unequal access to learning

Who lacks access to quality learning, skills, and opportunities, and why?

Stretched frontline workers

Where do educators and social workers lack practical digital support?

Tools that miss the context

Which digital tools are not designed for local languages, devices, and needs?

Fragmented public-interest tech

Where is useful technology rebuilt repeatedly instead of shared and reused?

These are questions to investigate and validate, not established findings. We will test each with the people affected.

OUR VISION

Technology that people can access, understand, and shape.

We want to help create a future where useful technology is built with communities, not only for them, and where responsible AI supports educators and social workers rather than replacing them.

Accessible
Usable across devices, languages, and abilities.

Community-centered
Needs guide every technology decision.

Responsible
Privacy-conscious AI with people in control.

Open
Shared tools and learning resources where possible.

FOUR IMPACT PILLARS

One mission. Four pillars.

Education and Learning

Tools and resources that improve access to learning, skills, knowledge, and opportunities.

Social Impact and Community Empowerment

Technology that helps communities, social workers, educators, and grassroots organizations address real challenges.

Responsible and Accessible AI

Human-centered AI that is useful, understandable, accessible, and appropriate for underserved communities.

Open Technology and Sustainability

Open-source tools, reusable infrastructure, public learning resources, and sustainable development approaches.

Many opportunities to create public good sit under these pillars.

OUR APPROACH

Community needs guide technology decisions.

1	2	3	4	5	6
Listen	**Understand**	**Build**	**Test**	**Share**	**Improve**

Listen → Understand → Build → Test → Share → Improve, then back to Listen

We test with intended users, protect privacy, design for accessibility, and share what we learn openly.

A PORTFOLIO, NOT A SINGLE PRODUCT

Many initiatives under one mission.

Independent applications

Focused tools for specific users.

Open-source tools

Reusable software shared publicly.

Research efforts

Evidence on what works and for whom.

Community initiatives

Work led with local organizations.

Every project defines its own

,

,

, and

.

INITIAL AREAS OF EXPLORATION

Potential directions, not established programs.

POTENTIAL DIRECTION

Accessible AI for educators and social workers

Practical assistance that keeps professionals in charge.

POTENTIAL DIRECTION

Learning tools for underserved young people

Foundational skills and literacy support.

POTENTIAL DIRECTION

Community problem-solving systems

Ways for groups to surface and track local needs.

POTENTIAL DIRECTION

Open technology resources

Shared tools and public learning materials.

Each direction will be validated with communities before any build begins.

WHY THIS INITIATIVE CAN BUILD

Technical experience, kept distinct from the foundation.

Independent work, not foundation-owned

The founder has published more than 23 Android applications as an independent builder.

Organizational work

Education and community-focused technology built in a professional NGO setting, as part of an organizational team.

Software engineering | **Android apps** | **AI systems** | **Backend infrastructure** | **Speech technology**

Also experienced in education-focused products. Past work shows capability; it is not a claim of impact.

ROADMAP · PROPOSED, NO DATES

Build the foundation before scaling the ambition.

Phase 1

Validate problems and consult communities.

Phase 2

Build and test small prototypes.

Phase 3

Publish useful tools and evaluate results.

Phase 4

Establish partnerships, strengthen governance, and pursue sustainable funding.

A proposed plan. Nothing here has been completed, funded, or agreed with partners.

INVITATION TO COLLABORATE

Help us build public-interest technology.

- Educators
- Social workers
- Researchers
- Open-source contributors
- Civil-society organizations
- Funders

Identify problems · Test solutions · Share knowledge · Build sustainable technology
